

ENERGYST TAP WATER UNIT SPECIFICATION

TAP WATER UNIT ETWU 550

ALL THE EQUIPMENT YOU REQUIRE FOR THE HEATING SOLUTION THAT SUITS YOUR NEEDS

Our contained, packaged tap water units have been designed for secure and reliable wholesome (potable) warm water production with temperatures up to +40°C.

The tap water units are equipped with the Alfa Laval AquaFlow system: a semi-instantaneous tap water system designed to provide domestic hot water in large quantities. Applications include apartment buildings, hospitals, hotels, retirement homes, nursing homes, schools, sports centres, prisons, large industrial warm water systems or event bathrooms and kitchens.

AquaFlow offers electronic control equipment that provides several user-definable functions to customise the system and ensure precise temperature control, thus allowing for our tap water units to be included in our customers' legionella prevention plans.

Our equipment comes with special tap water hoses (FDA & Sanitary approvals) and all additional ancillaries you require. Energyst's applications specialists are happy to advise about the tap water solution that suits your exact requirements.

We can provide a total solution for domestic tap water production by combining these tap water units with our hot water systems.

TAP WATER UNIT ETWU 550

TECHNICAL INFORMATION

Model		ETWU 550
Heating capacity ¹	kW	550
Build-in circulation pump	-	4 m ³ /h – Δh 120 kPa to 18 m ³ /h – Δh 20 kPa
Power supply	V/Ph/Hz/PE	400/3/50/PE
Power connection	-	CEE 32A (5-pole)
Power (max)	kW	3
Power protection (fuse)	A	10
Hydraulic connections	-	2" Camlock Stainless Steel
Tap water temperature range	°C	+10 / +40
Forklift pockets	-	Yes
Recommended Power Supply	kVA	3,75
Dimensions [LxWxH]	mm	2991 x 2438 x 2591
Full operational weight	kg	2690

1. Heating capacity based on +10°C water inlet temperature / +40°C water outlet temperature

Details are given for guidance only. Exact equipment may vary according to geographical location and availability.
